

TEKTIG introduces the **KSS** Weld Cleaner **Sliding Shroud**. The **KSS** is a revolutionary and practical new invention, it is easy to use, making weld-cleaning safer and quicker, a definite must for all professionals. The **KSS** performs three main functions; it confines the bristles to ensure that you clean what you want and not where the bristles point to; it acts as a reservoir for the electrolyte and **Reduced Spills**; and it extends the lifetime of the brush by as much as 200%.

The **KSS** is available in a kit form, complete with Wand, Sliding Shroud and three Conductive Brushes.

The **KSS** slides to expose the exact amount of bristles, so for a small detailed-work the brush is revealed as little as required, and when the going gets tough, like for **MIG welds**, a quick pull back of the **KSS** reveals as much brush to do the job fast and right first-time.

Power Enhancement is another feature of the **KSS**, its unique design improves the cleaning power as much as 50%.

TEKTIG proudly manufactures the **KSS** for all our Digital Weld Cleaners and the **USS** for **Other-Brand** weld cleaners. So, that is good news for **ALL** users. Call your distributor for a demonstration today.

KSS Main features:

- ✓ Accurate & Adjustable **Sliding-Shroud** exposes the right amount of Brush.
- ✓ Unique **Reservoir** feature for the Electrolyte cleaning fluid.
- ✓ Extends the **lifetime** of the Brush by as much as 200%.
- ✓ **Power Enhancement**, increase the power delivered by more than 50%.
- ✓ Solid and Industry Rugged Construction allows UHT Operation.
- ✓ Engineered **Handgrip** allows removal of the brush with ease.
- ✓ Unique ability to **Electro-polish** when combined with our **HTC-300** Digital Weld Cleaner.

The **Sliding Shroud** is available in four Kit Wand types:
